A. ELEVATED SECURITY THREAT RESPONSE

1.0 Introduction

1. ICAO requires each Contracting State to adjust its security response according to the level of threat to civil aviation within its territory.
2. Based on the Risk Management Matrix of the ICAO Security Manual, with a view to adjusting the security responses for threat targeted at the airport, aircraft operators or high risk flights under different threat levels, a Civil Aviation Risk Management Plan (CARMP) for the HKIA has been developed. As part of the Hong Kong Aviation Security Programme, the CARMP serves as the sole reference indicator of threat level and corresponding countermeasures at the HKIA.
3. In the context of the CARMP, a high risk flight refers to a flight of a specific aircraft operator and / or to a destination which, based on intelligence from the Police, may be subject to a higher threat.
4. The CARMP adopts the 6-level threat system, as used by the Police. Under the Hong Kong Aviation Security Programme, the Police are responsible for the threat assessments. Where there is information to suggest that a credible threat exists to civil aviation in Hong Kong, the Police shall advise the Aviation Security Authority and Civil Aviation Department (CAD) accordingly.
5. When threat level is “negligible”, the security measures form the baseline responses on which more stringent security measures are built upon. To meet the raised levels of threat, for implementation at the centralised screening checkpoints prior to entering the sterile area, tighter security measures are proposed. Further enhancements to security responses are then adopted at departure gates to meet the specific levels of threat for high risk flights.
6. The security controls adopted under the different threat levels in the CARMP only set out the minimum requirements of the Aviation Security Authority. To further secure their operations, this does not prevent the airport manager or aircraft operators from tightening security controls as they may think fit.
7. To supplement the CARMP, the AA has developed its own internal HKIA AVSEC Risk Management Plan (HKIARMP), which, during any period of elevated threat, provides additional guidance and reference as to the additional measures that may be necessary. The HKIARMP is a four level threat response system, adopting the colour code of Green, Amber, Red and Black. The purpose of this document is to (1) allow the AA to adjust security measures at the HKIA pursuant to its own threat assessment in circumstances where, under the CARMP, no adjustment of the threat level is deemed necessary; and / or (2) allow the AA to supplement measures already contained under the CARMP with additional measures. The HKIARMP is included in this document as item G.
8. To identify the threat, according to Police’s specific intelligence, joint meetings will be convened and will, through consultation with Police, AA, AVSECO, aircraft operators and their handling agents as appropriate, decide on additional security controls that may be required.

2.0 Definitions

1. The threat levels in the CARMP are defined as follows:
 - a. **Negligible:** A target is unlikely to be attacked;
 - b. **Low:** There is nothing to indicate that a target would be singled out for an attack;
 - c. **Moderate:** A target's circumstances indicate that there is potential for it to be singled out for attack;
 - d. **Significant:** Recent general intelligence on terrorist activity, the overall security and political climate, or the target's general circumstances indicate that it is likely to be a priority target;
 - e. **High:** Specific intelligence, recent events or a target's particular circumstances indicate that it is likely to be a high priority; and
 - f. **Imminent:** Specific intelligence shows that a target is at a very high level of threat.
2. Under the HKIARMP threat levels are defined as follows:-
 - a. **Green:** Equivalent to Negligible / Low;
 - b. **Amber:** Equivalent to Moderate;
 - c. **Red:** Equivalent to Significant; and
 - d. **Black:** Equivalent to High / Imminent.

3.0 Objectives

1. To establish alerting channels for all internal / external affected parties;
2. To formalise the processes under which tightened security measures, in accordance with respective threat levels, are implemented; and
3. Under such circumstances, establish clear lines of command and co-ordination between organisations working in support of airport operations.

4.0 Alerting

Under normal circumstances, any escalation or de-escalation of the Threat Alert Level will be declared by the Aviation Security Authority, or CAD as delegated by it.

B. ROLES & RESPONSIBILITIES

1.0 Aviation Security Authority / CAD

The Aviation Security Authority or CAD will convene joint meetings to decide, in consultation with Police, AA, AVSECO, aircraft operators and their handling agents, on additional security controls that may be required.

2.0 Airport Authority

1. In support of the Police, and to ensure safety and to minimise the impact of any incident on airport operations, oversee the safety of all operations at the airport and coordinate additional security controls by AVSECO, airport operators and aircraft operators; and
2. Where appropriate, conduct its own risk assessment and apply additional measures as contained in the HKIARMP.

3.0 Police

1. Conduct a threat assessment, and provide its assessment and advice to the Aviation Security Authority.
2. Where Police resources are deployed, the Police's most senior officer present shall have command and control of that aspect of the operation, and may summon representatives from other airport organisations to assist him / her in co-ordinating the additional security controls.
3. During an Imminent Threat Alert Level, in the interests of public safety, the Police may override the rights and privileges that the owner of a facility, or tenant, may otherwise enjoy. Under such circumstances, the owner of the facility, or tenant, shall act in support of the Police, until such time as the incident is stood down and control of the facility is returned to them.

C. ADDITIONAL SECURITY CONTROLS

1.0 Implementation

1. When an Imminent Threat Alert Level is declared by the Aviation Security Authority, or CAD as delegated by it, at the screening checkpoints prior to the Enhanced Security Restricted Area, additional security controls including but not limited to the following may be implemented with immediate effect:
 - a. Increased use of pat-down search;

- b. Increased hand search of passengers and crew cabin baggage and / or other restrictions, such as the prohibition of carry-on bags or handbags except for limited items e.g. passport, wallet, electronic paraphernalia and prescribed medicines essential for the duration of the flight etc.;
 - c. Explosive trace detection screening of all laptops and other electronic paraphernalia; and
 - d. Enhanced vehicle search.
2. Any persons not complying with the additional security controls will not be accepted for entry into the Enhanced Security Restricted Area.

D. INFORMATION DISSEMINATION AND MEDIA HANDLING

1. The Secretariat Press Office shall, in consultation with the Information Services Department, Police Public Relations Branch and AA Corporate Affairs Department, co-ordinate all media enquiries relating to the incident; and
2. All press or media enquiries to the AA regarding any such incident should be referred to the Senior Manager, Media Relations, who will liaise with the Secretariat Press Office for an appropriate response.

E. STAND-DOWN OF ALERT

When the Aviation Security Authority is satisfied that the threat level to civil aviation in Hong Kong has decreased, and additional security controls responses are no longer required, it shall stand down the alert. Parties will be notified in accordance with alerting arrangements as per section A.4.0 above.

F. AIRPORT AUTHORITY AIRPORT EMERGENCY CENTRE

1.0 Implementation

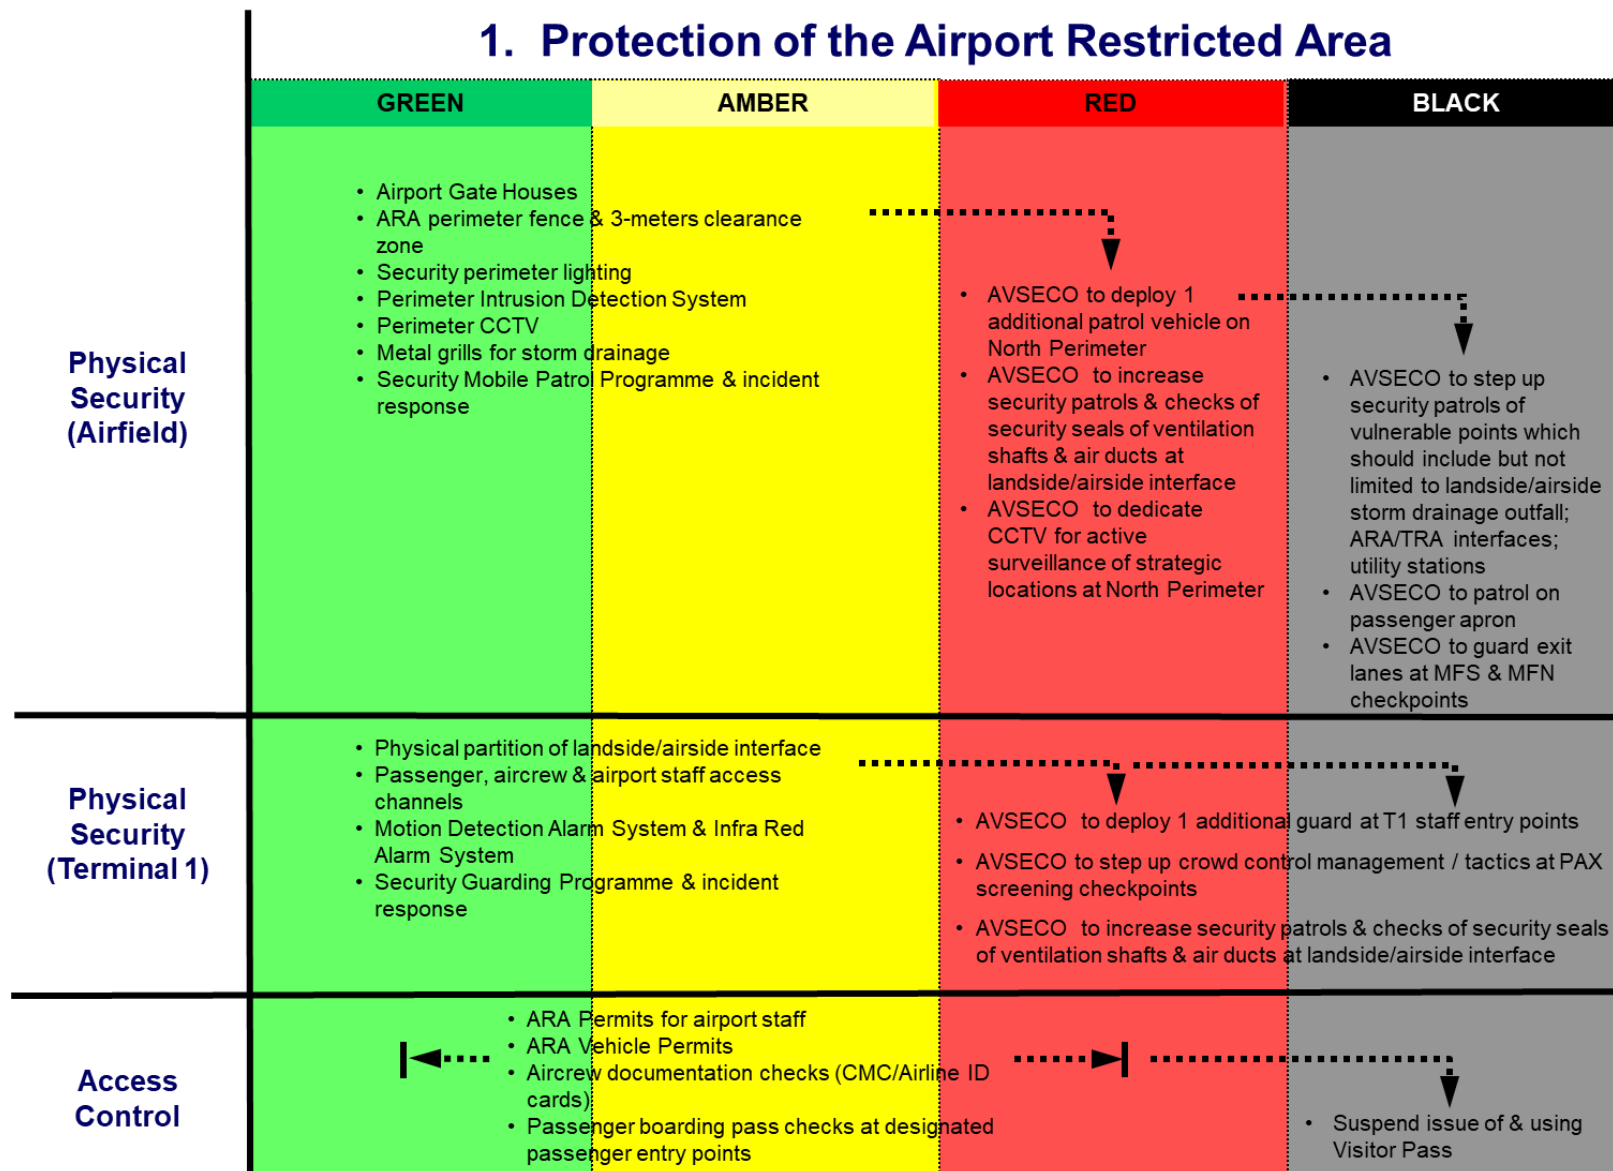

1. As a result of any elevated threat, and if substantial impact(s) is caused or expected to be caused to normal airport operations, the Airport Emergency Centre (AEC) will be activated by the Airport Duty Manager;
2. To facilitate the emergency responses and rapid restoration of the airport to normal operations, the Airport Emergency Centre, located inside the Integrated Airport Centre (IAC), adjacent to Airport Gate 1, (Plan 10 Airport Grid Map C-25), will be activated during an airport emergency, and function as an off-scene central point of command and co-ordination for the Police, AA, government departments, AVSECO, aircraft operators, handling agents and airport operators;

3. The Airport Emergency Centre will be staffed by the Airport Duty Manager and initially the IAC Duty Teams, until they are relieved by the support team from Safety, Security and Business Continuity Department; and
4. The operations of the Airport Emergency Centre will be supported as necessary, by representatives of: aircraft operators / handling agents concerned; AVSECO; Airline Operators Committee (AOC); Hong Kong Airline Service Providers Association (HASPA); Police; AA Corporate Affairs Department; Information Services Department; Airline's Ramp Handling Franchisee; Airline's Line Maintenance Franchisee; and AA Technical Services Infrastructure Department.

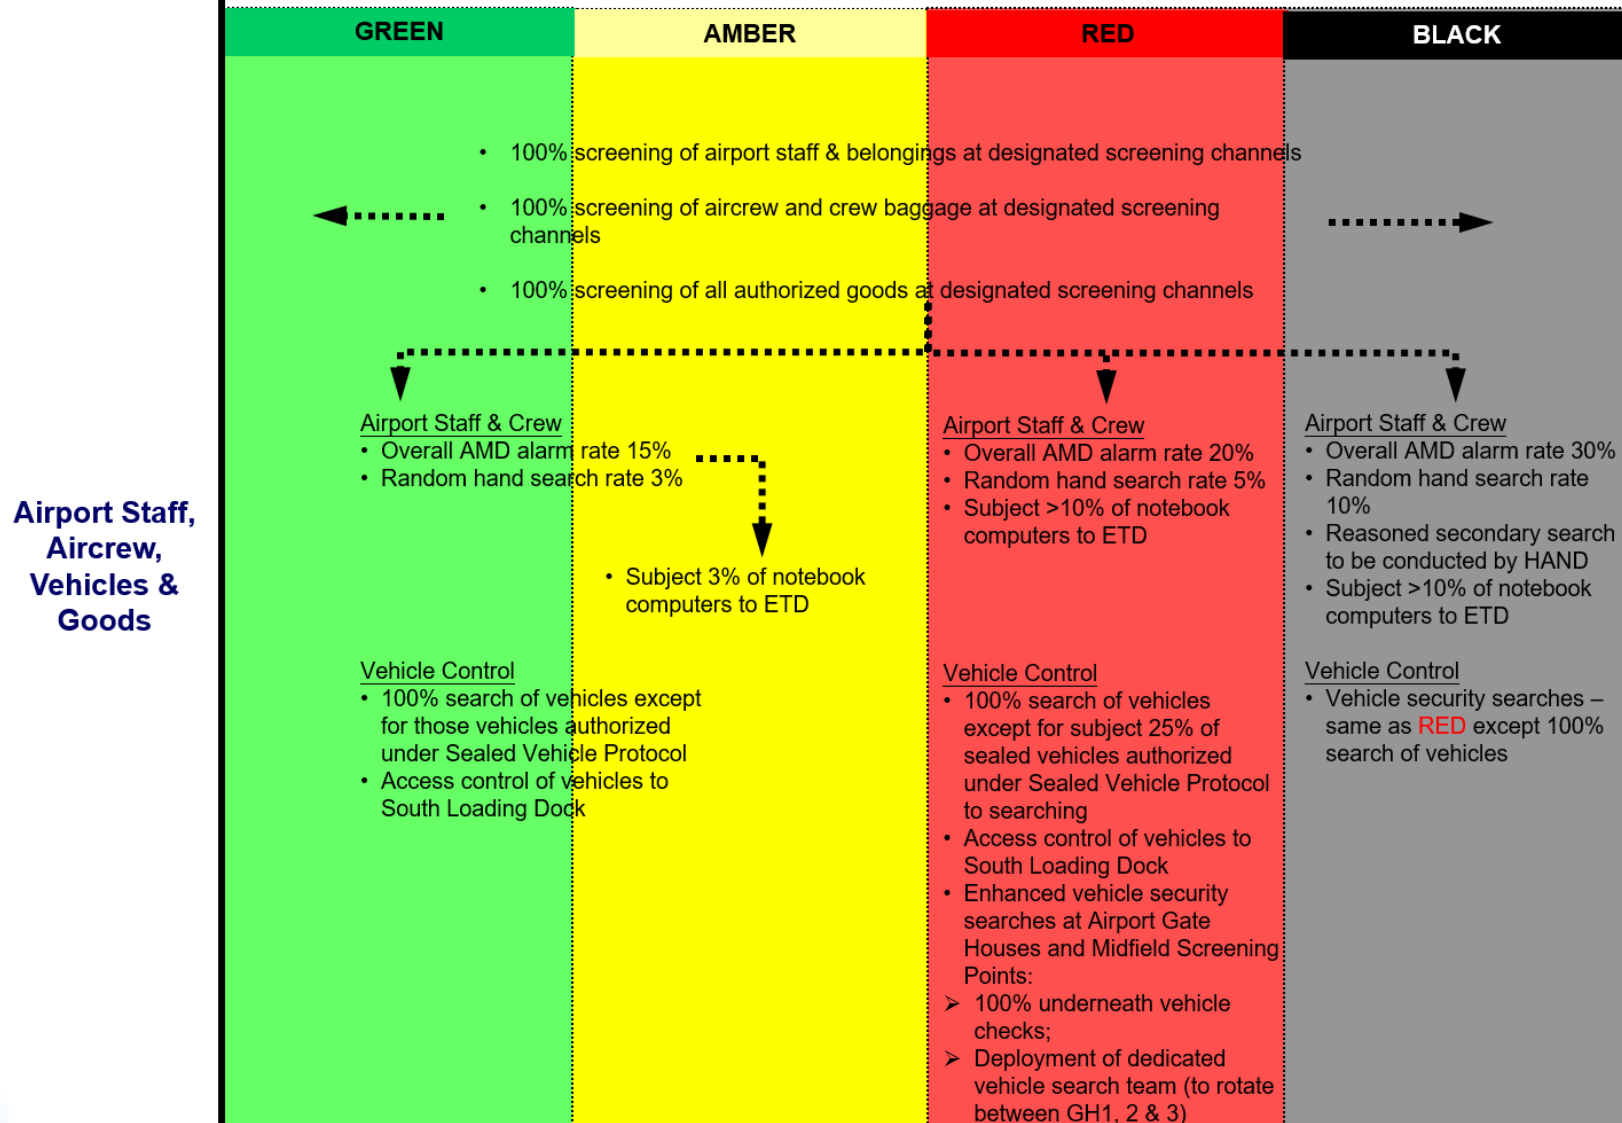

G. HKIA AVSEC RISK MANAGEMENT PLAN

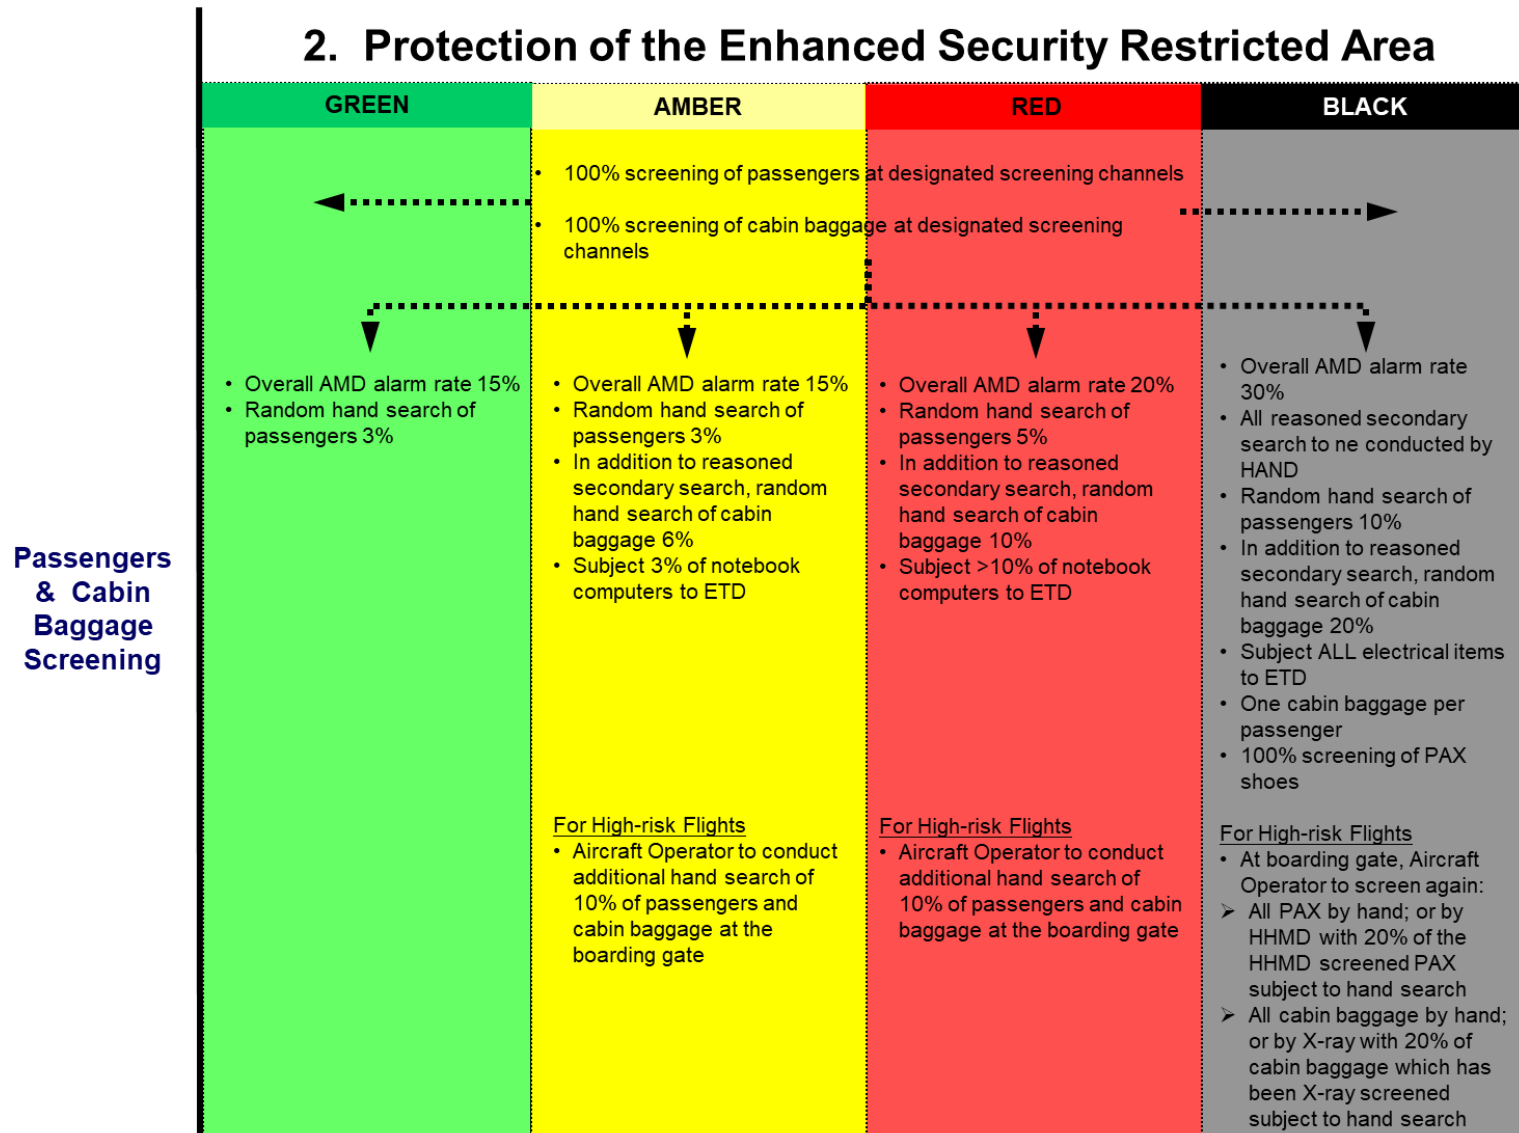

Scope:

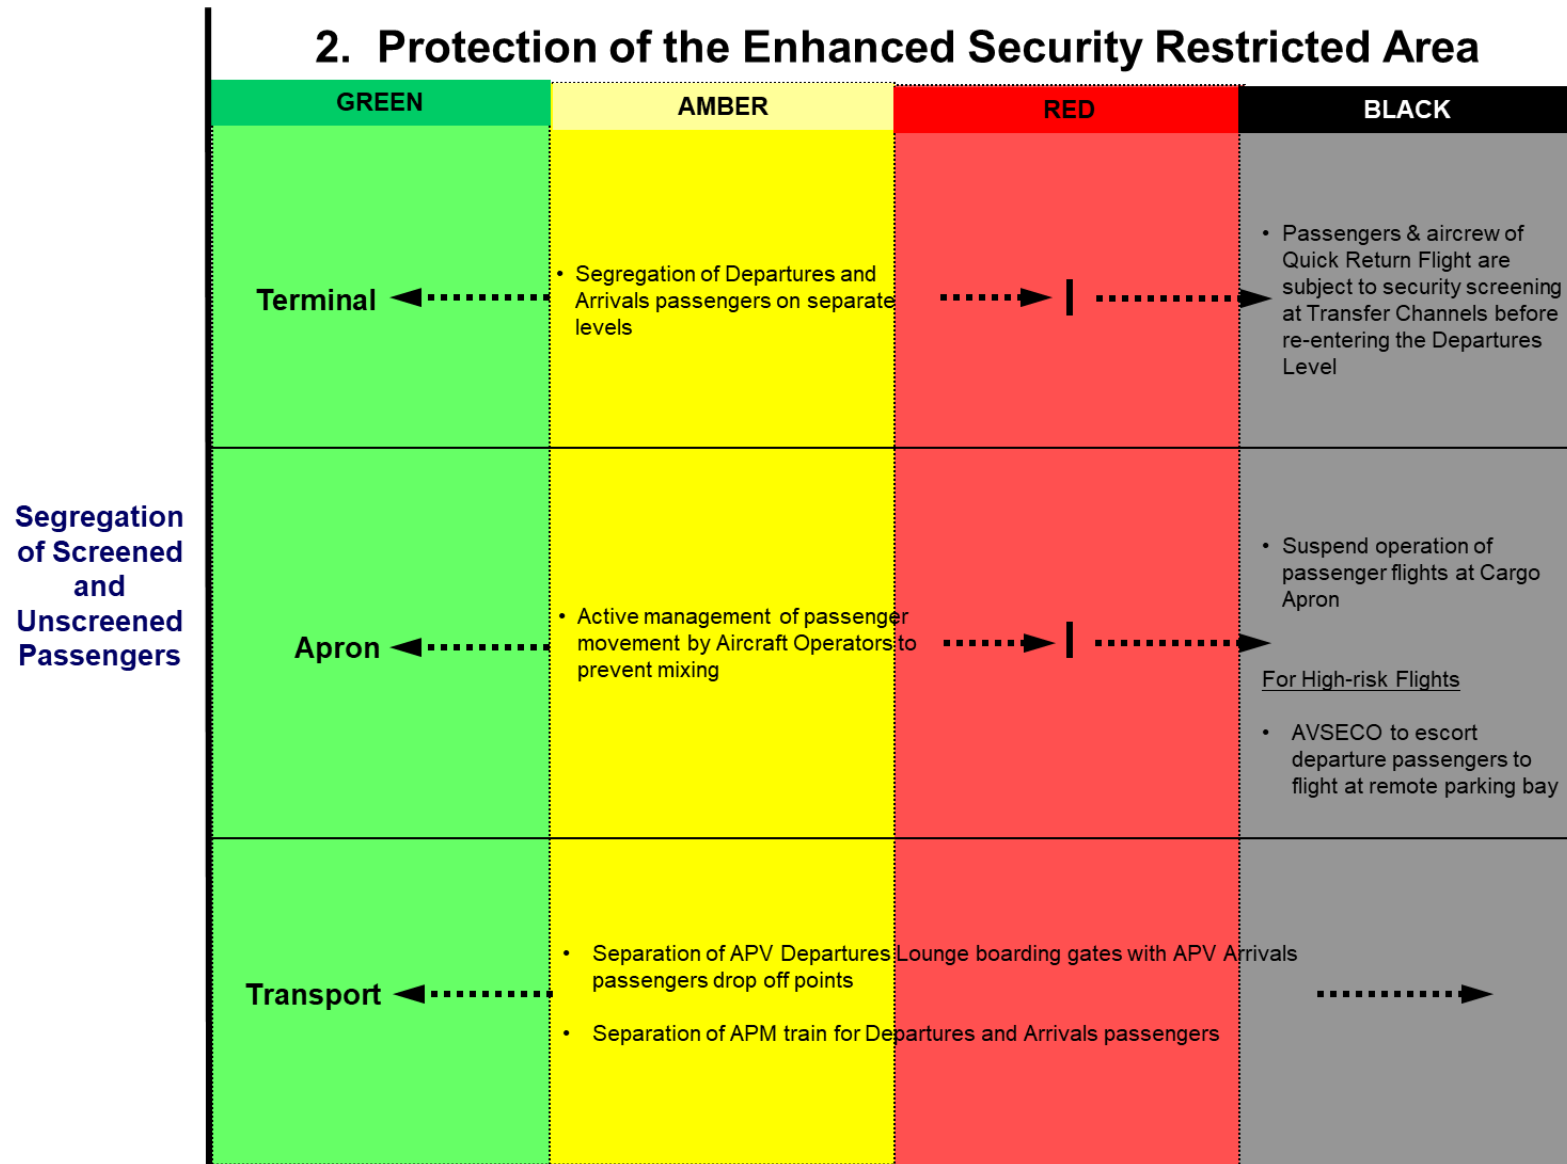

1. Protection of Airport Restricted Area;
2. Protection of the Enhanced Security Restricted Area;
3. Aircraft Security;
4. Hold Baggage Security;
5. Air Cargo, Courier & Express Parcels and Mail Security;
6. Aircraft Catering Security; and
7. Landside Security

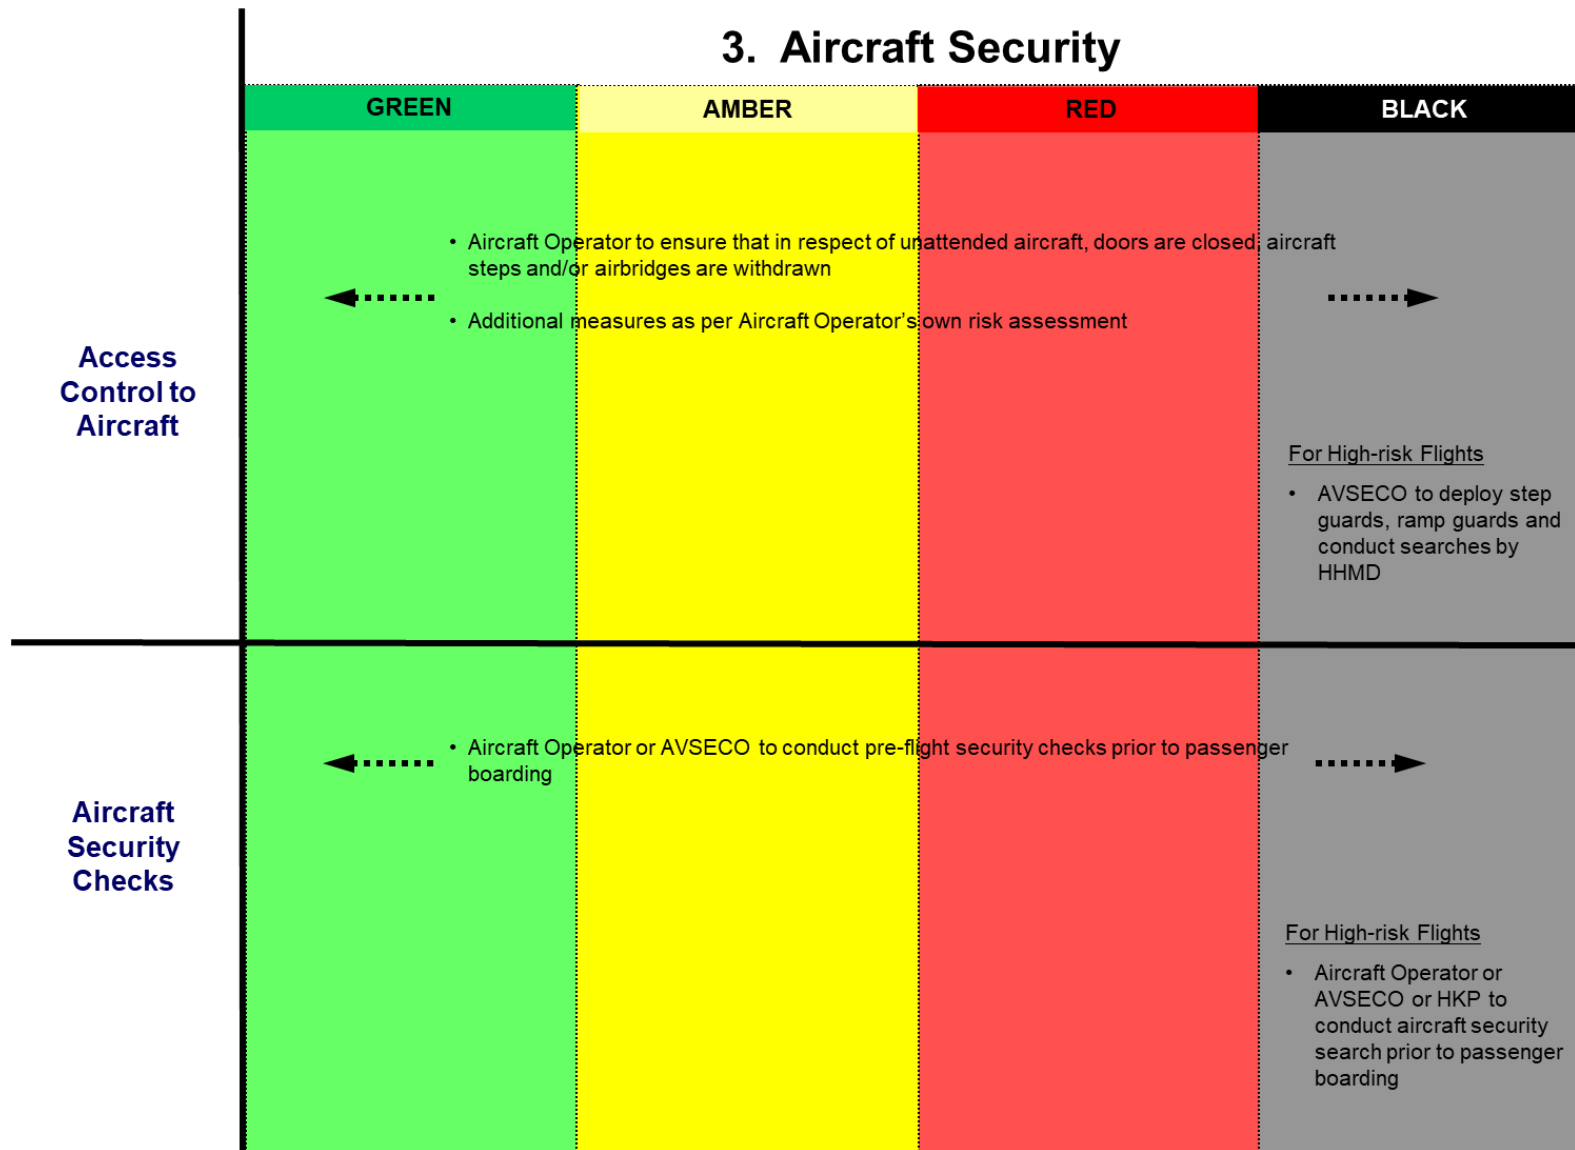

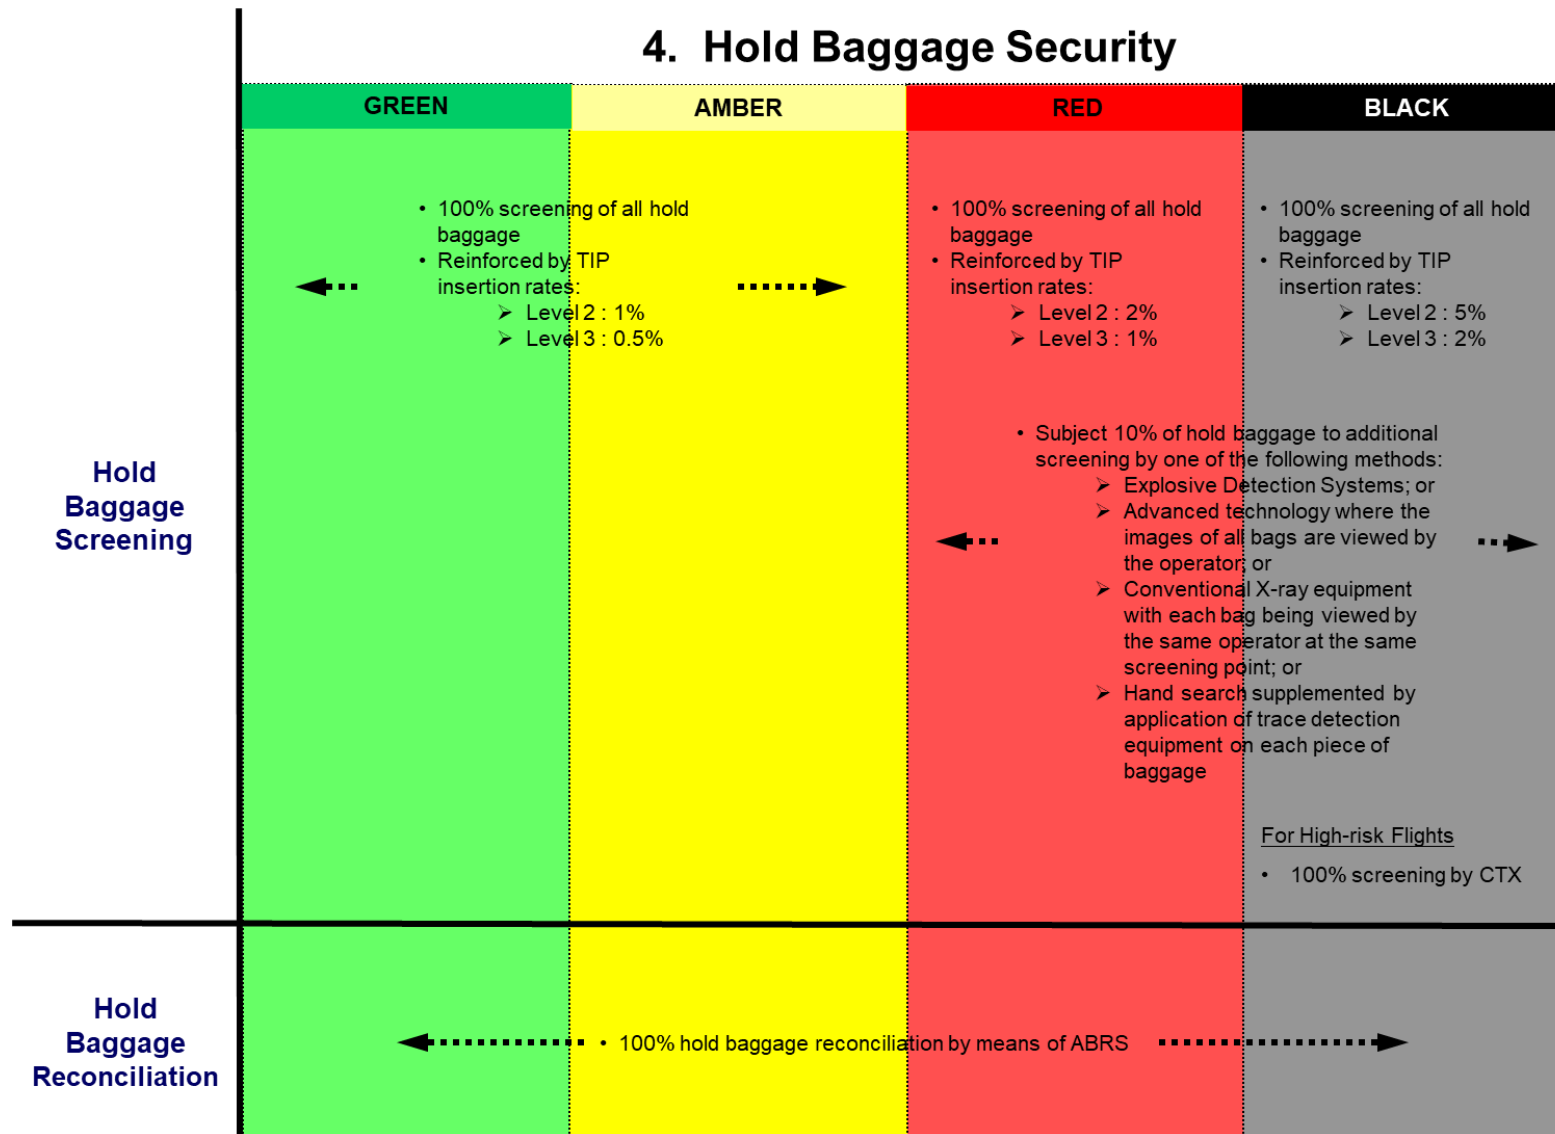

2. Protection of the Enhanced Security Restricted Area

4. Hold Baggage Security

	GREEN	AMBER	RED	BLACK
Unaccompanied Hold Baggage	<ul style="list-style-type: none"> 100% screening of all hold baggage with TIP image insertion (i.e. through regular Hold Baggage Screening) Aircraft Operator to conduct checks to establish ownership and history of unaccompanied hold baggage's journey and cross check with outstations Additional screening of the baggage by one of the following methods: <ul style="list-style-type: none"> Explosive Detection Systems; or Advanced technology where the images of all bags are viewed by the operator; or Conventional X-ray equipment with each bag being viewed by the same operator at the same screening point; or Hand search supplemented by application of trace detection equipment on each piece of baggage Aircraft Operator to notify the Aircraft Commander that such baggage has been entered onto the Baggage Manifest 			<p>For High-risk Flights</p> <ul style="list-style-type: none"> 100% screening by CTX
